

A Sales Reporting Application

Prof. Jonathan Lee (李允中)

Department of Computer Science and
Information Engineering
National Taiwan University

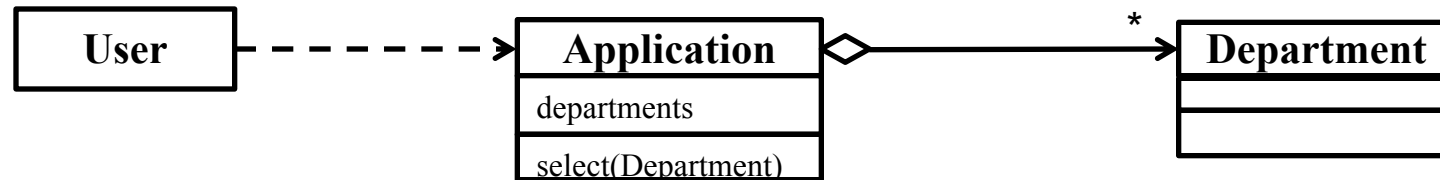

Requirements Statements

- ❑ Build a sales reporting application for the management of a store with multiple departments.
- ❑ Users should be able to select a specific department they are interested in.
- ❑ Upon selecting a department, two types of reports are to be displayed:
 - Monthly report - A list of all transactions for the current month for the selected department.
 - YTD sales chart - A chart showing the year-to-date sales for the selected department by month.
- ❑ Whenever a different department is selected, both of the reports should be refreshed with the data for the currently selected department.

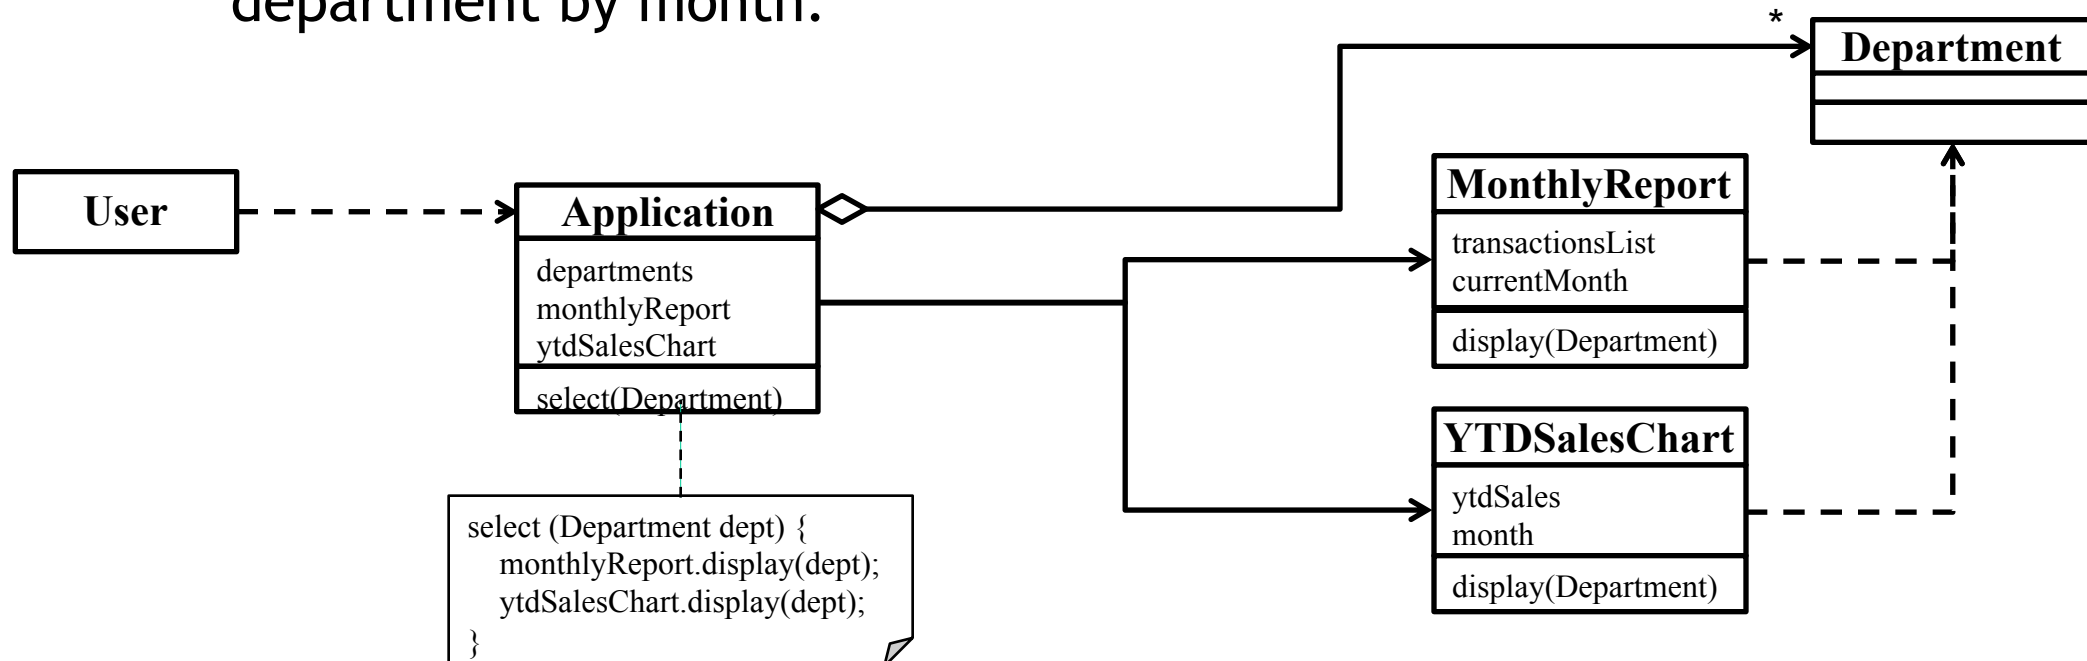

Requirements Statement₁

- ❑ Build a sales reporting application for the management of a store with multiple departments.
- ❑ Users should be able to select a specific department they are interested in.

Requirements Statement₂

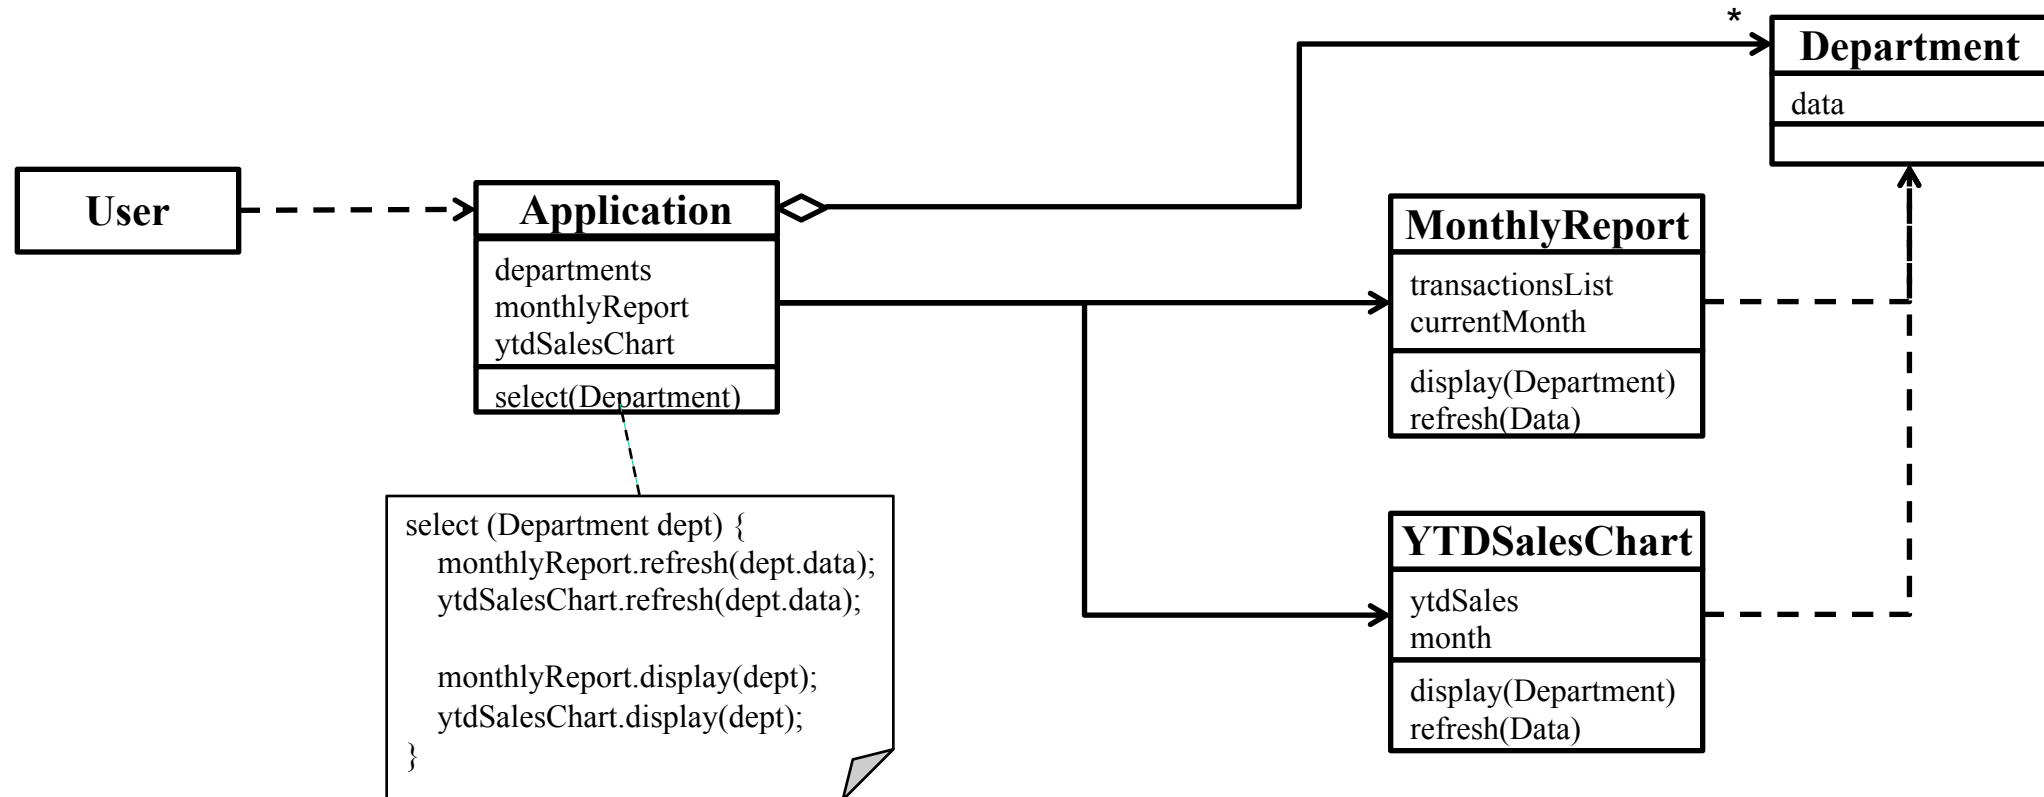

- Upon selecting a department, two types of reports are to be displayed:
 - Monthly report - A list of all transactions for the current month for the selected department.
 - YTD sales chart - A chart showing the year-to-date sales for the selected department by month.

Requirements Statement₃

- Whenever a different department is selected, both of the reports should be refreshed with the data for the currently selected department.

Initial Design
